Skills

Area(s) of Interest	Software Development, Web Development, Data Structure and Algorithms
Programming Language(s)	C, Java
Web Technologies	HTML, CSS, JS, Bootstrap4
Tools :	Github, Visual Studio Code
Framework OR Library :	ReactJs, Redux, NodeJs
Database :	PostgreSQL, MySQL

Education

Degree	Institute	Year	CPI/Aggregate
B.Tech.-IT	Indian Institute of Information Technology, Vadodara	2017-Present	7.48
Intermediate	Shakti Shanti Academy, Dighwara, Chhapra	2016	76.60%
High School	Bhagwat Vidyapeeth, Rushi Chawni, Chhapra	2014	9.8 CGPA

Work Experience

Summer Internship

I worked in the **Snapschool** company this summer vacation. During my internship period i have learned many things and i have also participated on the live project. In this project HTML, CSS, CodeIgniter framework stack are being used. Database is made in MYSQL.(view certificate)

Projects

Covid-19 Tracker (Web Application - ReactJS)   **Guide: Self**

In this project it shows globally data by default through the graphical representation regarding the covid-19 cases like number of infected, recovered and deaths of the people. If someone wants know the data about any specific country then he can also see the data through bar graph about the covid-19 cases. This project is made in ReactJS. Github-Link
This project is deployed on netlify link.

Github-Finder (Web Application - ReactJS)   **Guide: Self**

In this project users can search their github account and see their some details about them like their bio, followers, following, last five repos etc. This project is made in ReactJS. Github-Link
This project is deployed on netlify link.

Movie-Series-Application (Web Application - ReactJS and Redux)   **Guide: Self**

In this application user can search any movie and some movie related to query are displayed on page. User can see some brief details about any of the movie which is displayed on page. To build application i am using ReactJS, Redux and IMDB api. Github-Link

Zomato clone (Web Application - Javascript)   **Guide: Self**

This project is similar like zomato where user can get some resturant by submiting the city name and dish type in the search form. After that some resutaurant has been display on the page based on the query. User can see some details about restaurant like rating, menu, etc. I am using Zomato api in this project. Github-Link.
It is deployed on netlify link.

Online Railway Reservation System **Guide: Prof. PM Jat(DAIICT)**

This is group project of DBMS based on PostgreSQL in which users can book and cancel their ticket and also can see his details of his ticket like date of journey, fare of the ticket, source station, destination station. Github-Link

Awards and Achievements

- Participation in coding contest on Codechef.
- A **Nanodegree certificate from Udacity** to complete the **React** course (view certificate).
- A **Coursera certificate** from Hong Kong University of Science and Technology for completing a **Front-End Web Development with React** course (view certificate).

Declaration : I hereby declare that all the details furnished above are true to the best of my knowledge and belief.
